

WALL PANEL CONFIGURATIONS FOR CLAD BOY® MODEL HD

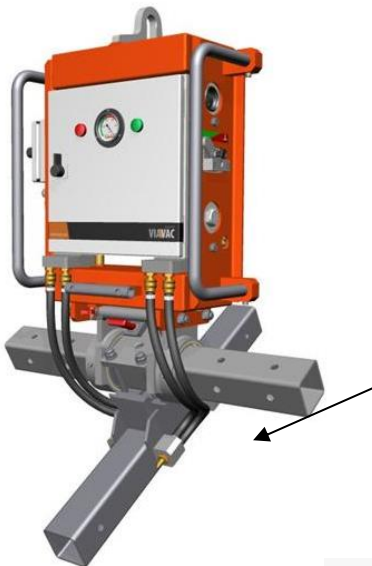

The machine is supplied with a storage and transport cradle

Using 4 x 220 lbs suction pads, the unit can be configured for both horizontal and vertical wall panels weighing up to 880 lbs.

Traverse extension arms and pad mounts are included and allow long horizontal wall panels to be lifted with ease.

The traverse tilting bar allows the machine to be configured for long vertical wall panels, providing maximum panel support.

Using 4 x 440 lbs double suction pads, the lift capacity of the unit can be increased to 1760 lbs in defined configurations.

A more typical configuration utilises the double suction pads on traverse extension arms to provide increased panel support and in this form the unit can handle panels weighing up to 1320 lbs.

NOTE - As with all Clad Boy® vacuum panel lifters, the HD model has been proven to work effectively and safely with all industry standard panels, including mineral wool cored panels.

However it is essential that the panel skins are fully bonded and that the panel core is homogenous and free of any defects.
